

RESELLER PLANS

HOW TO MASTER RESELLING HOSTING

1.) PURCHASE A SPOT ON OUR SERVER

Similar to Website Hosting, when you purchase reseller hosting you get a slice of our server to use as your own. This is quite a big slice in comparison to website hosting as you'll be needing lots of space for all your clients.

2.) WEBSITE, BRANDING AND PACKAGES

You should have a name for your hosting business, as well as a website. We offer CMS such as WordPress which can help with producing a website. You should also have backend billing software such as WHMCS or Blesta. It's important that you create some plans for your customers to purchase, too!

3.) GET SET UP

DCT Host offers cPanel and WHM to all its hosting clients. WHM can link in with your billing system to make things easier for you. You get access to cPanel for your own hosting website, and all your clients get access to it for their websites. Think of cPanel as the front end panel, and WHM as the backend panel. Only you get access to WHM as you manage your clients and the global settings here.

4.) TWEAK YOUR SETTINGS

Using WHM, you can really take control of your entire hosting business. We recommend you to read the documentation for WHM, cPanel and whichever billing system you use. This will help when changing your settings.

5.) COME TO US FOR HELP

We aren't like most resellers - we want to help you grow as a business! If you want something modified, added or just need help with something, let us know so we can help you out.
